

Data sheet

Ski- and snowboard storage

aluminum profile for 5 pair of ski/snowboard

Aluminium profile for 5 pair of ski / snowboard

- aluminium profile
- stores your skis and/or snowboards safe and clear
- length of profile: 100 cm
- self-sticking clips covered with slide-blocking rubber
- flexible space between clips
- easy to use
- perfect storage, above the floor

Frame with hinge for 10 or 6 pair of ski / snowboard

- frame with hinge, aprox. 120° swivelling
- sectional steel, light grey powder coated or stainless steel / Inox
- frame size: 53 cm
- frame depth: 85 cm or 55 cm
- self-sticking clips covered with slide-blocking rubber
- safe and lucid storage for skis and / or snowboards
- flexible access to each item
- maximum spatial use between each single frame
- distance between frames: aprox. 40 cm
- ideal storage, clearance from floor
- off seasons frames can be removed with one movement

frame with hinge for 10 or 6 pair of ski/snowboard

The ski depot (frame) will be fixed in the wall by screws with the attached hinge in a height of about 1,85 m (top edge) and it's pivotable sideways in a radius about ca. $\pm 60^\circ$. They can be flicked through like sides of a book. Every setdown position can be reached quickly and easily.

Which one to take

Spatial depth could be used perfectly with the flexible frames. You are able to store 50 pairs of skis within only 1,8 m². For that you just need 2 m wall and 5 frames.

You have plenty of wall surface? Then the aluminium profile is the right choice because you hardly need more spatial depth than your fixed items.

model		height	width	depth	weight
aluminium profile for	5 Pair of ski/snowboard	8 cm	100 cm	8 cm	1,9 kg
frame with hinge for	6 Pair of ski/snowboard	55 cm	15 cm	55 cm	4,6 kg
frame with hinge for	10 Pair of ski/snowboard	55 cm	15 cm	85 cm	5,9 kg
